# Ethics, Regulations & Sustainable AI

SPOUG ERFA Group – 24 April 2025

Tech.  
Change.  
Today.

# Topics for today

- 01** – What is (Responsible) AI?
- 02** – AI and challenges... *before* ChatGPT
- 03** – The current state of Responsible AI
- 04** – Key considerations for implementing Responsible AI
- 05** – The future of Responsible AI

**What is (Responsible) AI?**

**01**

# So... What is AI exactly?

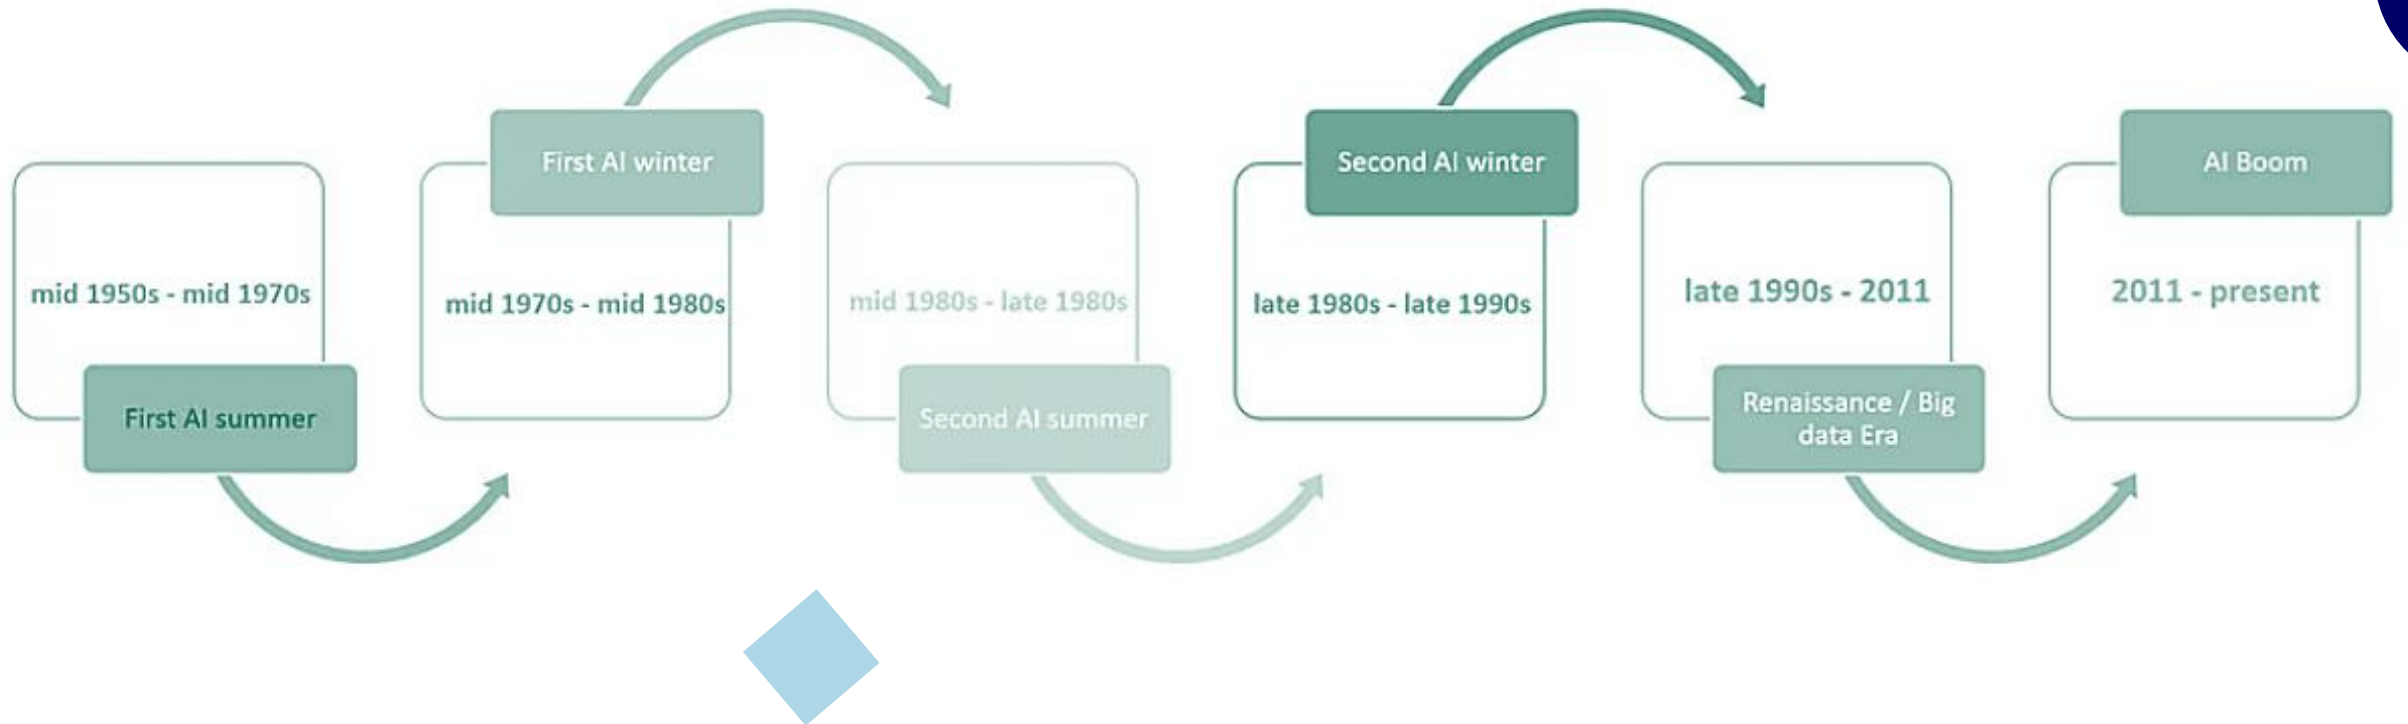

## Artificial Intelligence is not a new technology

ARTIFICIAL INTELLIGENCE TIMELINE

<http://sitn.hms.harvard.edu/flash/2017/history-artificial-intelligence/>

## AI Cycles – Summers and Winters of AI investment

# Artificial Intelligence comes in many shapes and forms

## Hype Cycle for Artificial Intelligence, 2024

**Gartner**

## Digital Ethics

Digital Ethics goes beyond the question of what is within legal boundaries. It revolves around the question of how one should **handle data and new technologies in a responsible manner** (*Deloitte*)

## Responsible AI

Responsible AI is the practice of designing, developing, and deploying AI with good intention to **empower employees and businesses, and fairly impact customers and society**—allowing companies to engender trust and scale AI with confidence (*Accenture*)

# The AI and challenges... *before* ChatGPT

02

## “Things” are becoming more human-like with moral imprint

- Now: People and organizations
- Free will, concept of good and bad, conscious decisions

*Autonomous — Complex —  
Contextual*

No moral agency, but a moral imprint and moral impact

EU “electronic person”

- Inanimate world
- The rock doesn't move, it is moved

# Different perspectives on the role of the Artificial Intelligence

The Maker

The Development

The Custodian

The Biological

The Practical

Perspective	Aim to please human beings	The HumanisticEquivalent	TakeCare of the Greater Good	Grow and sustain	There is no meaning
Function	Behave as human as possible	Behave as autonomous as possible	Detect needs of the environment, and map to what the AI cando	AI programming AI	Built for purpose, performing certain tasks
Relationship	Focus to connect to human beings. (Personalized)	Behave appropriately in as many situations as possible.	Be as connected as possible	“The strongest survive” (Swarms with Darwinist algorithms)	As needed for purpose

## Who is responsible for AI-based behaviors?

First position:

**User**

“Technology is neutral, it’s in the use.”

Second position:

**Designer**

“Every artefact is an personification of the ideas of the designer.”

Third position:

**AI**

Responsibility level:

- Pet?
- Child?
- Nature?

## Moral dilemma – Autonomous cars

What should the self-driving car do?

## Apple contractors 'regularly hear confidential details' on Siri recordings

Workers hear drug deals, medical details and people having sex, says whistleblower

## La Liga fined over app that spied on illegal match screenings

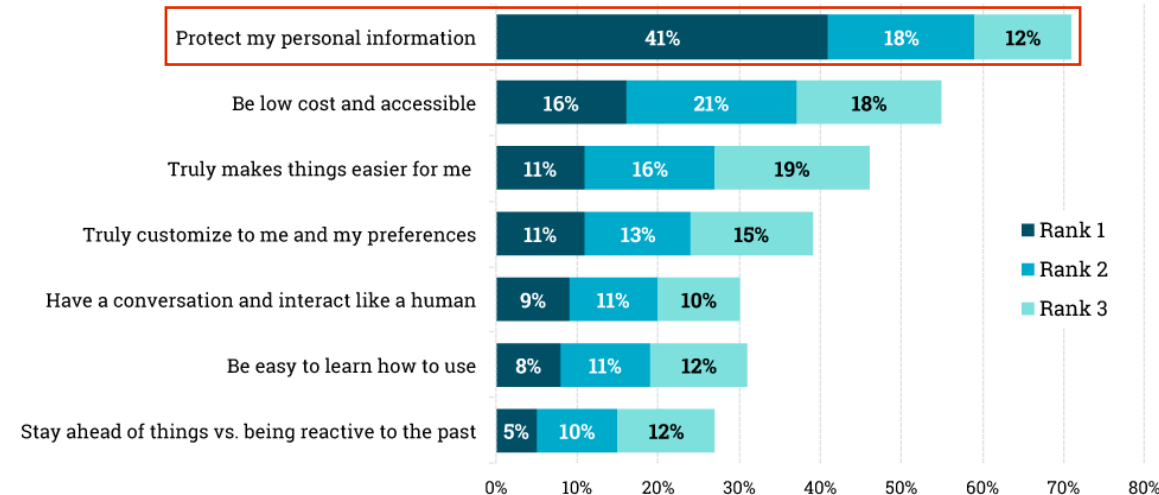

- €250,000 fine imposed by data watchdog
- 'We profoundly disagree with this decision'

# Main concerns for implementing AI solutions

## 8 years ago

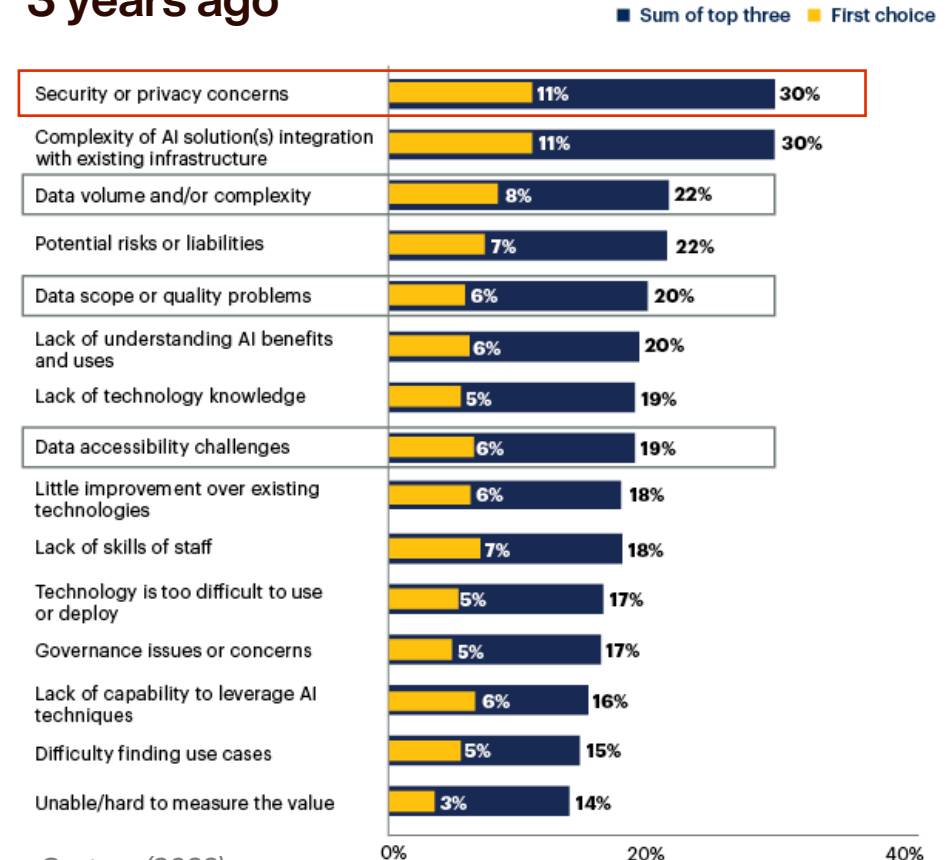

### Consumers' Biggest Concerns With Artificial Intelligence\*

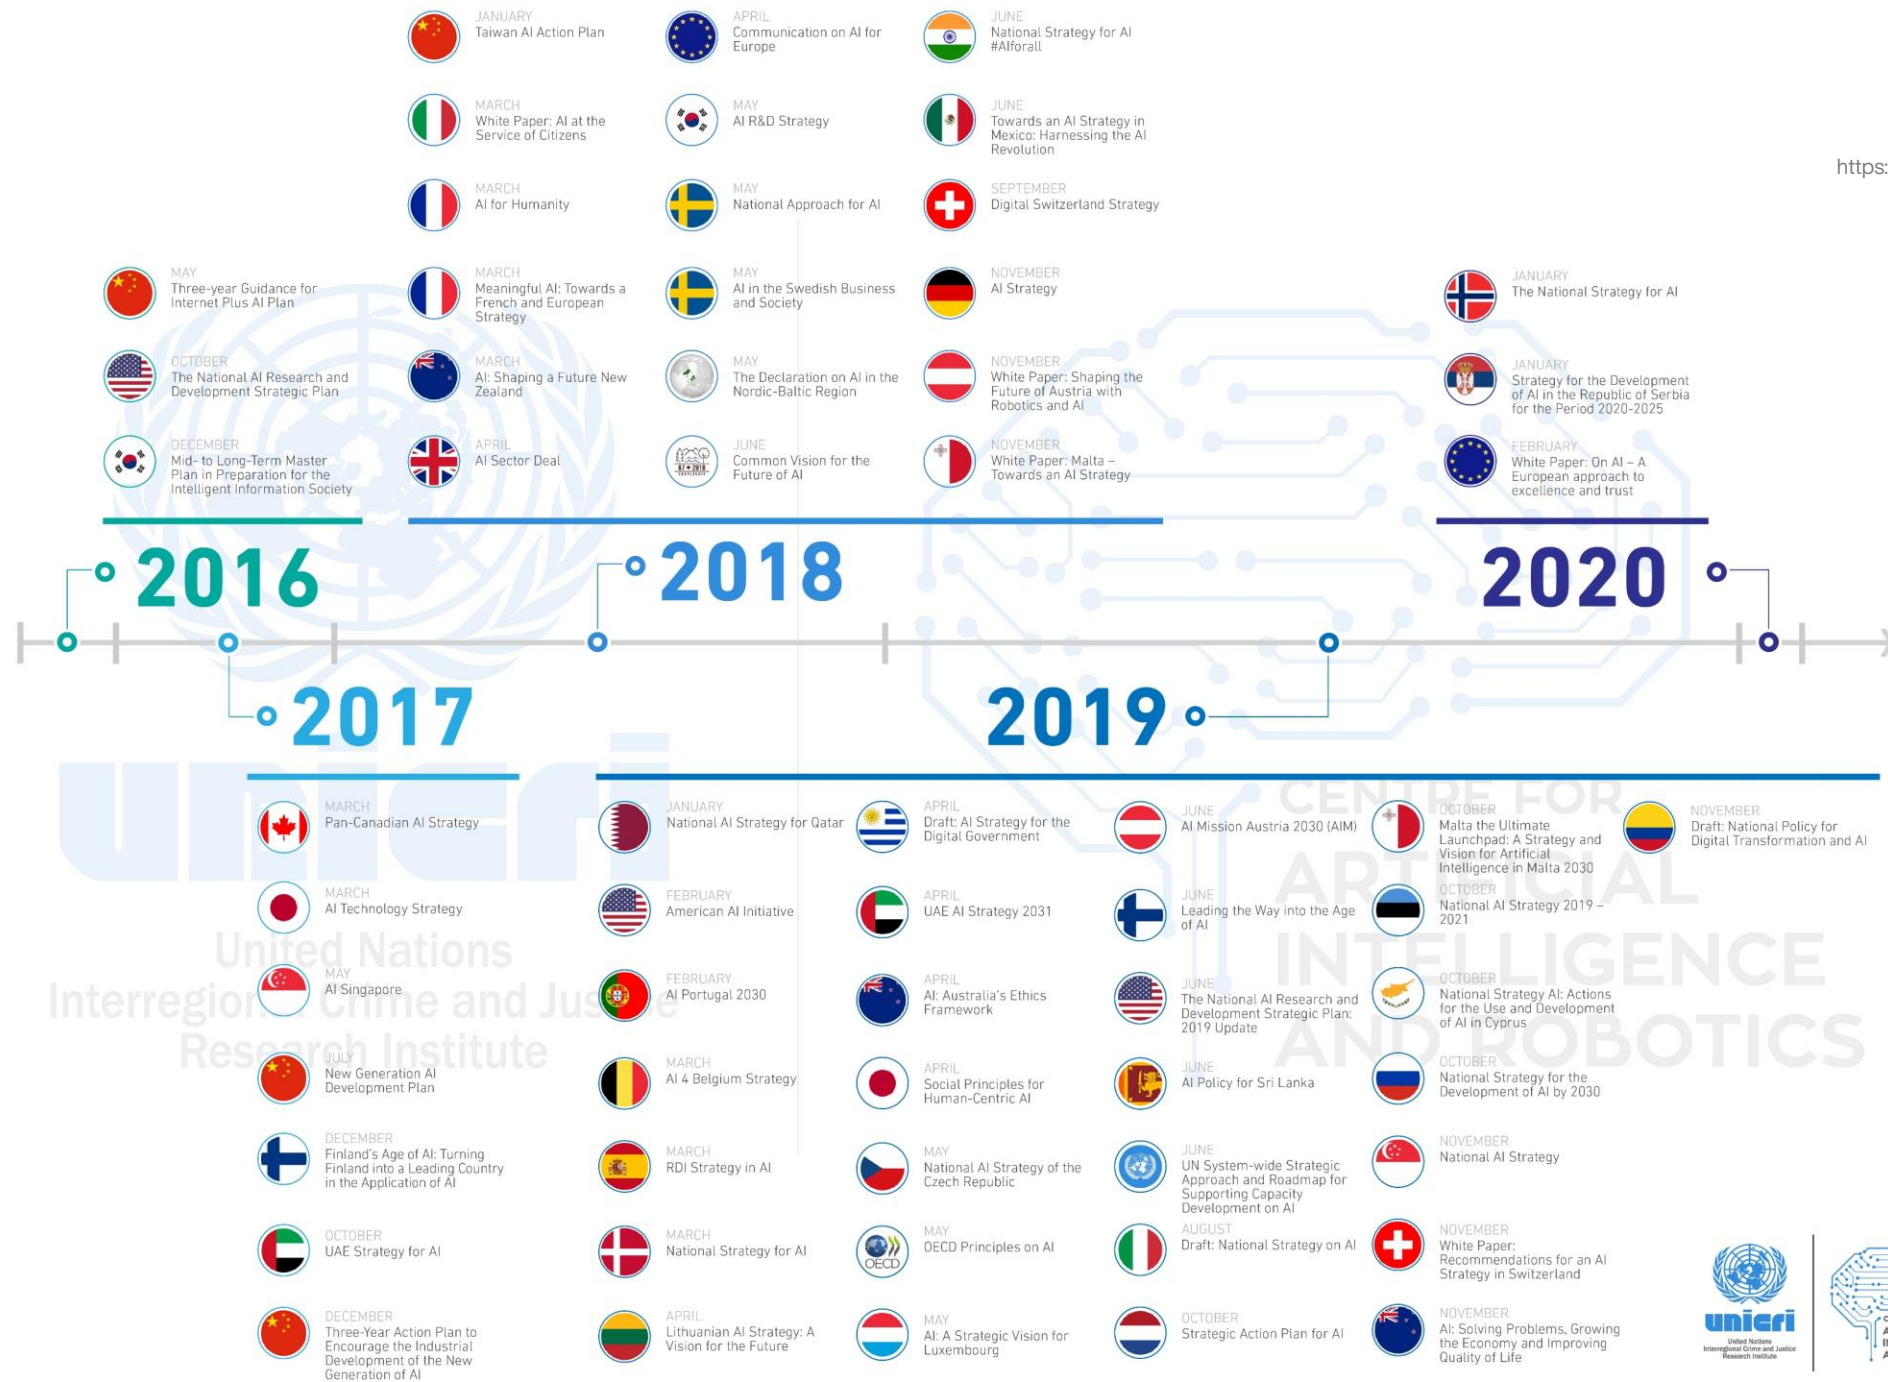

Published on MarketingCharts.com in November 2017 | Data Source: The Integer Group

\*Based on "tech enthusiast" respondents (3,615) from a survey of 3,665 US consumers. Tech enthusiasts are those who described artificial intelligence in positive terms.  
Q: "What are your biggest concerns when it comes to artificial intelligence in the future?"

## 3 years ago

Gartner (2022)

## Political input from OECD, European Union and National strategies

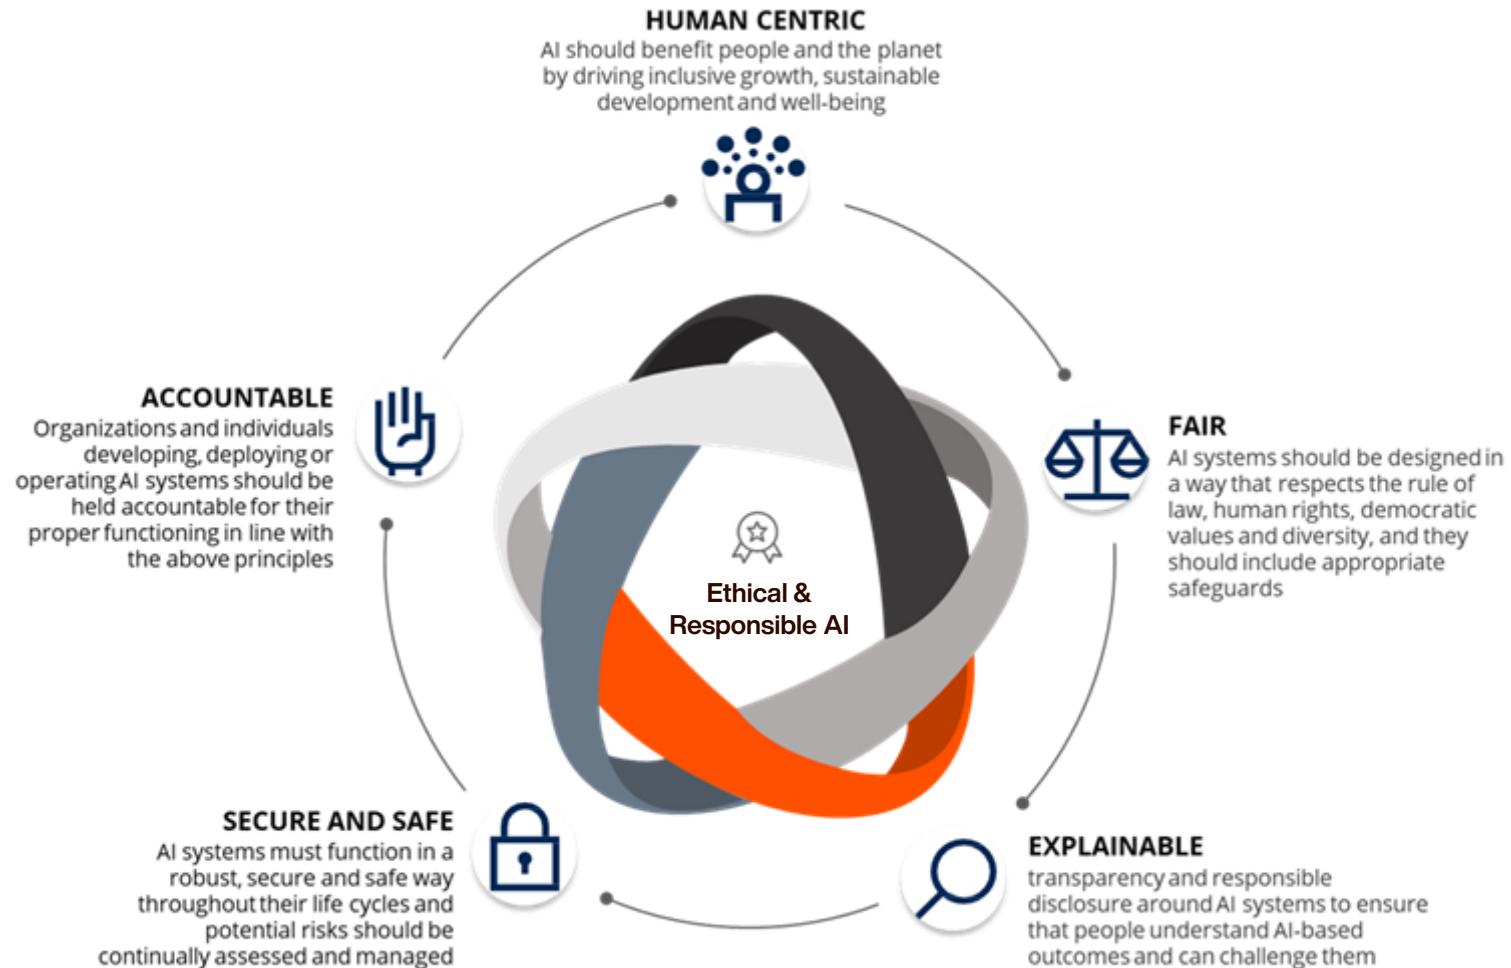

## EU Artificial Intelligence Act still pending in 2022...

*"On Artificial Intelligence, trust is a must, not a nice to have. With these landmark rules, the EU is spearheading the development of new global norms to make sure AI can be trusted. By setting the standards, we can pave the way to ethical technology worldwide and ensure that the EU remains competitive along the way. Future-proof and innovation-friendly, our rules will intervene where strictly needed: when the safety and fundamental rights of EU citizens are at stake."*

**Margrethe Vestager**, Executive Vice-President for a Europe fit for the Digital Age

## Principles of Ethical & Responsible AI

# The current state of Responsible AI

03

**ChatGPT**

## Different regional approaches when it comes to AI

# AI Act – the world's first AI regulation!

The EU AI Act is the world's first AI regulation that aims to create a legal framework for the development and use of **trustworthy, ethical,** and **fair** AI systems in the European Union.

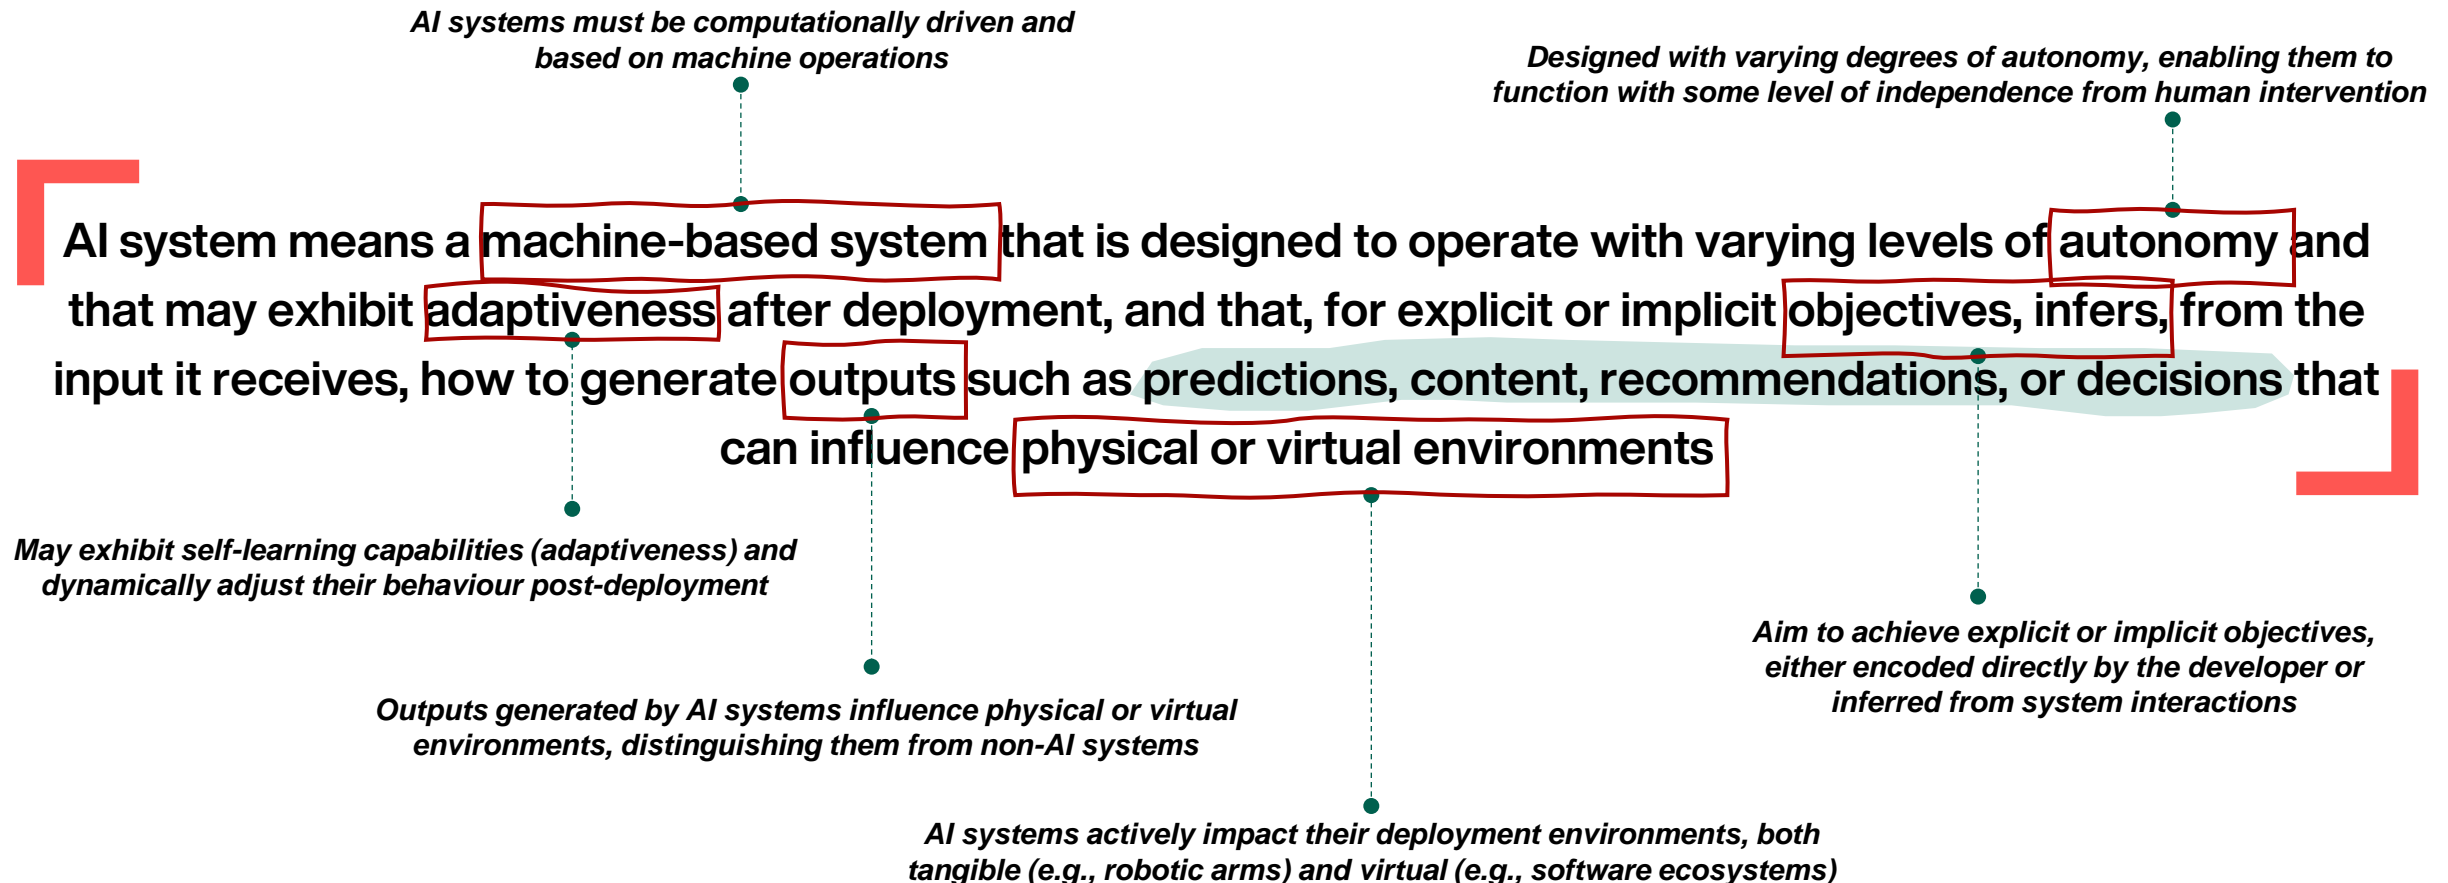

The AI Act has two main objectives:

- a) AI systems should be overseen by people, rather than by automation, to prevent harmful outcomes.
- b) Establish a technology-neutral, uniform definition for AI that could be applied to future AI systems.

The legislative act was published in the EU's Official Journal in July and entered into force on 1 August 2024. The regulation will apply two years after its entry into force, with some exceptions for specific provisions.

# How does the EU (and AI Act) define **Artificial Intelligence**?

# AI Act – a risk-based approach

Risk level	Requirements	Examples of AI usage	EU AI Act does <u>not</u> apply to
<div></div> Unacceptable risk	Prohibited AI practices	Social Scoring*	<div></div> Systems used exclusively for military or defense purposes
<div></div> High risk	Conformity Assessment	Credit Scoring	<div></div> Systems solely used for research and innovation
<div></div> Limited risk	Transparency	Chatbot	
<div></div> Minimal risk	No obligations	Mail filters	<div></div> People using AI for non-professional reasons

\*China is using AI in classrooms

# Requirements for High-risk AI systems

The high-risk AI systems used in eight different contexts are in scope for a conformity assessment\*

- Biometrics
- **Critical infrastructure**
- Education and vocational training
- **Employment**
- Access to essential services – both public and private
- Law enforcement
- Immigration, asylum, and border control management
- Administration of justice and democratic processes

\* <https://artificialintelligenceact.eu/annex/3/>

# Generative AI, like ChatGPT, would have to comply with transparency requirements\*

Disclosing that the  
content was  
generated by AI

Designing the  
model to prevent it  
from generating  
illegal content

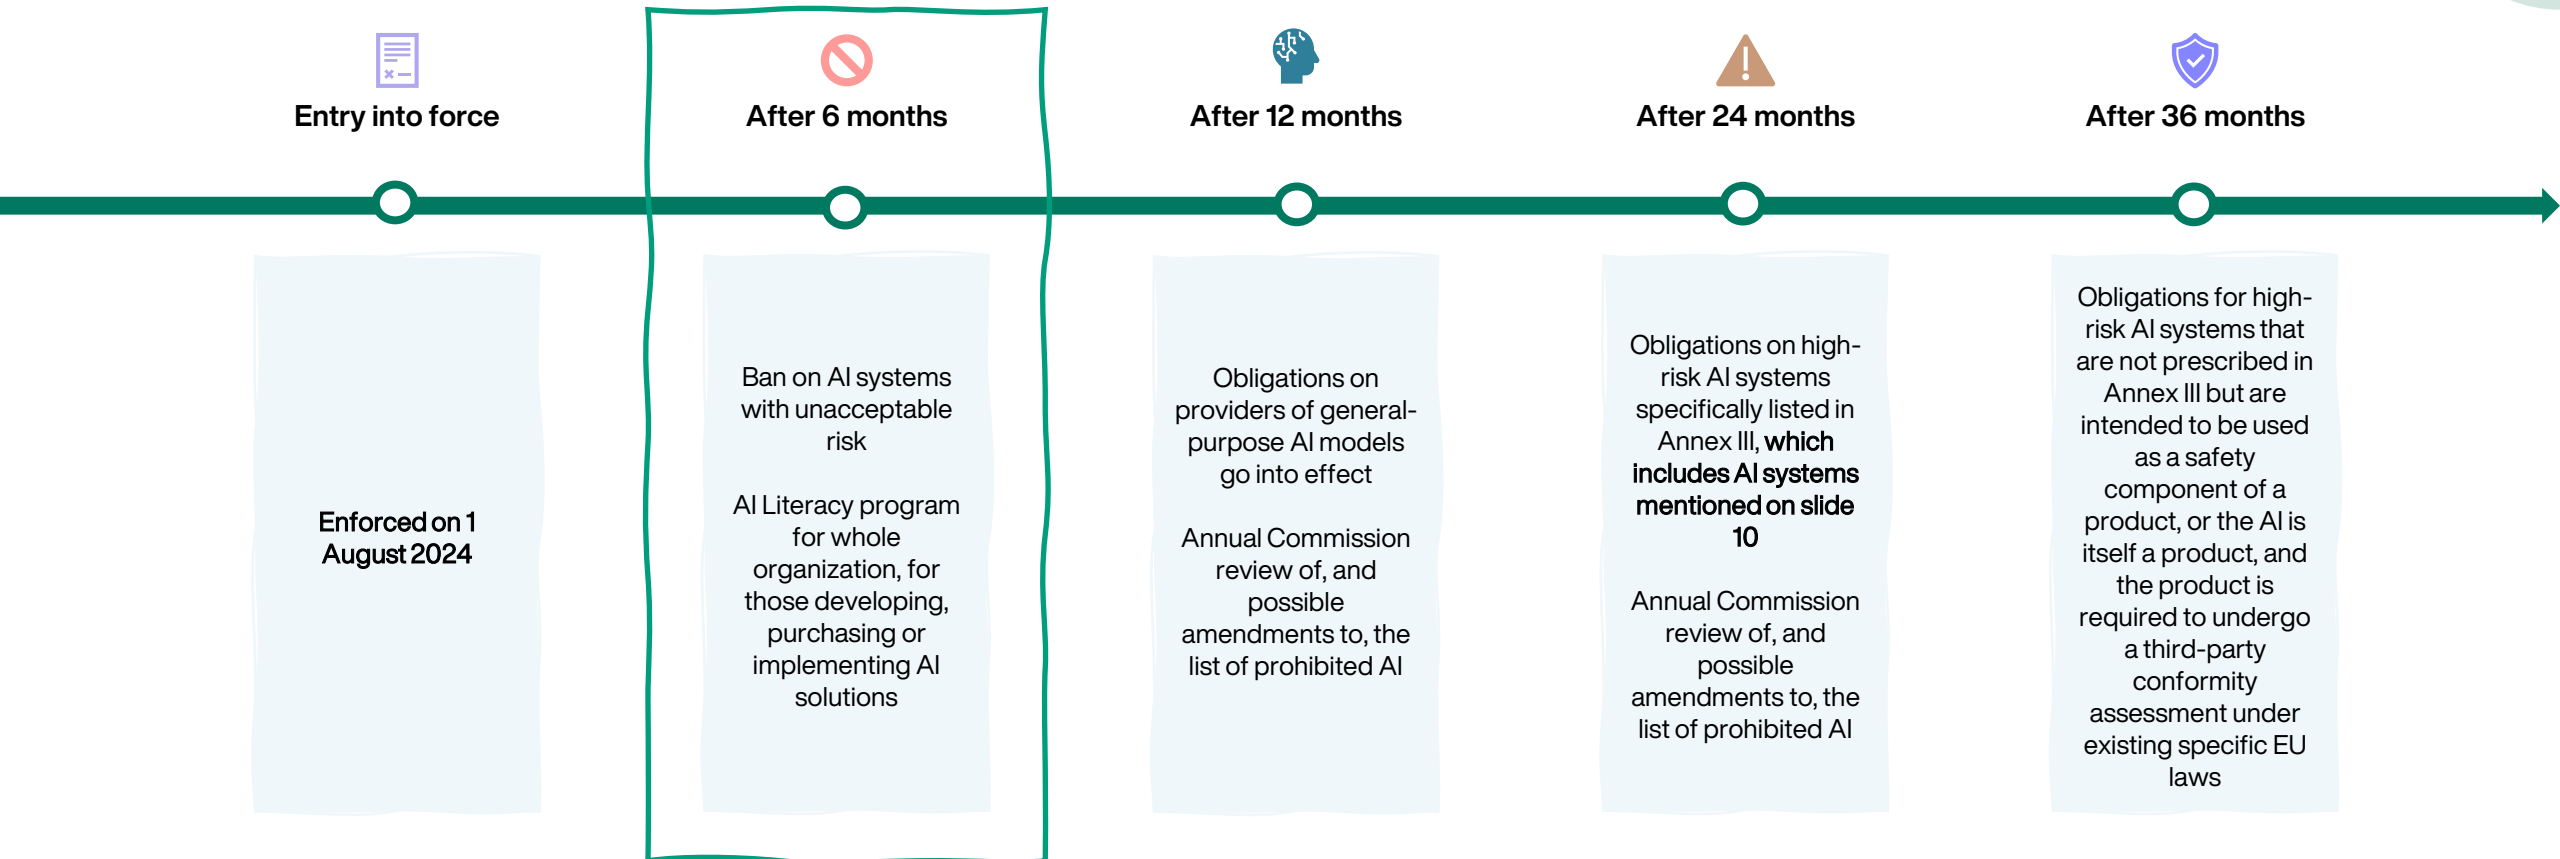

Publishing  
summaries of  
copyrighted data  
used for training

\*Generative AI and the AI Act

# AI Act timeline

# Key considerations for implementing Responsible AI

04

# From Digital and Data to AI literacy\*

*[...] a view of technological functioning and the understanding of underlying computing processes in the discussion of phenomena of the digital world is absolutely necessary, which the three literacies should take into account"*

*"Data Literacy is the ability to collect, manage, evaluate, and apply data, in a critical manner"*

*"the ability to understand information and – more important – to evaluate and integrate information in multiple formats that the computer can deliver"*

*"a set of competencies that enables individuals to critically evaluate AI technologies; communicate and collaborate effectively with AI; and use AI as a tool online, at home, and in the workplace"*

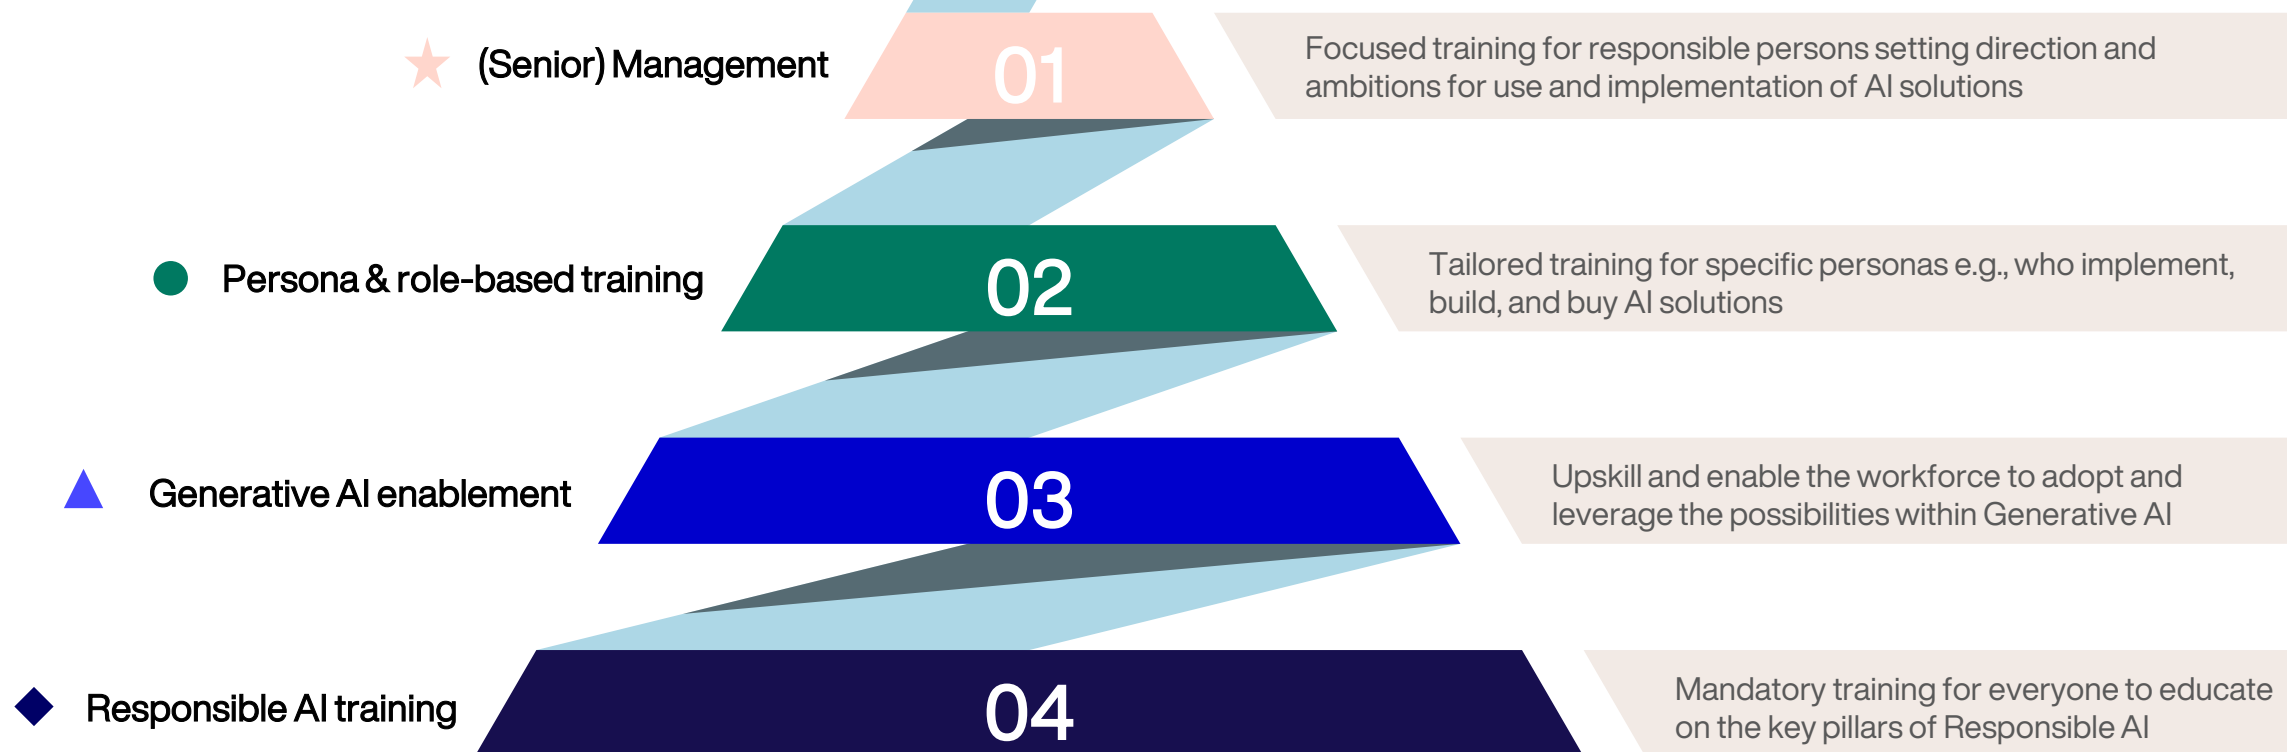

\*Kreinzen, M., & Schulz, S. (2023): *Towards the Triad of Digital Literacy, Data Literacy and AI Literacy in Teacher Education – A Discussion in Light of the Accessibility of Novel Generative AI*
